

## DirecTV Schedule of Installation Fees and Services

### Standard Receiver Professional Installation Includes:

- Mounting and grounding the DirecTV dish to within 20 feet of utility ground on an exterior wall of a single family dwelling and within a 100 foot cable length of the connected television.
- Installing up to 100 feet of exterior RG-6 cable to one (1) DirecTV (primary) receiver through one collocated exterior and interior wall to include inductance loop.
- Routing of cable through a standard wood frame structure or a single layer of masonry.
- Connection of the primary DirecTV receiver.
- Connecting primary DirecTV receiver to a phone jack, if receiver is within 25 feet of phone jack.
- Maximize the signal strength of the DirecTV programming.
- Consumer education on the basic operation of the DirecTV receiver.
- Contact Programmer(s) to activate account(s).
- Obtain signed Programmer(s) contract, Sign Off of completed installation work order, and Sales Terms by the consumer.

### Standard Receiver Professional Installation Does Not Include:

- Install or relocation of additional receivers (unless purchased separately).
- Extra RG-6 cable over 100 feet per run.
- Mounting and grounding the DirecTV system 18" mini-dish on any surface of the home where a 25 foot ladder cannot reach.
- Drilling through more than 1 collocated exterior and interior wall.
- Phone jack wiring where existing service is more than 25 feet from receiver.
- Providing any enhancements to existing phone or audio/visual systems.
- Connections to stereo, VCRs, and/or various audio components that are not collocated with the DirecTV receiver.
- Special moldings or other cosmetic hardware used to hide exposed cables.
- Non-penetrating roof mount, pole mount, or chimney mount.
- Removal and/or repair of previously mounted equipment.

### Multi-Room Standard Receiver Professional Installation Includes:

- Includes all of the items listed above for Standard Receiver Professional Installation plus...
- Installing and routing up to 100 feet of RG-6 cable per DirecTV (secondary) receiver(s) through one collocated exterior and interior wall.
- Connection of the additional secondary DirecTV receiver(s).
- Connecting additional secondary DirecTV receiver(s) to a phone jack, if receiver(s) is/are within 25 feet of a phone jack.
- Consumer education on the basic operation of the secondary DirecTV receiver(s) (if applicable).

### Advanced (2-tuner) Receiver Professional Installation Includes:

- Includes all of the items listed above for Standard Receiver Professional Installation plus...
- Provide installation and routing of one (1) additional line of up to 100 feet of RG-6 coaxial cable to run from one (1) additional LNB port to one (1) advanced (2-tuner) receiver through the same collocated exterior and interior entry points.
- Customer is responsible for downloading additional services once DirecTV programming has been activated.

### Regulations:

- 1) National Electric code recommends all dish installations be grounded within 20 feet to the house Utility Ground.
- 2) FCC Part 68.213c requires inside phone wiring to meet minimum standards of category 3.
